UI/UX Design Document
LifeBook

Current screens, and an honest note on what has not been user-tested

Prepared by LifeBook Inc. • Version 4.0 • September 2026

1. Design principles

- Quiet by default, warm at the moment of delivery.
- The mood grid names real research — but "researched" and "user-validated" are different claims; see section 2.
- The dark purple/teal theme was deliberately kept through a navigation redesign that could have implied a lighter theme.

2. The mood grid has been redesigned three times without a single user test

Version	Basis	Outcome
6-mood distress spectrum (v1)	Original product reasoning — meet people in hard moments	Replaced
4-mood upbeat set (v2)	A single external UX audit document	Replaced — lost the ability to represent real distress
6-mood research-grounded set (v3, current)	LifeWay Research, Barna Group, Ignatian tradition	Not yet shown to a real user

Recommendation: before any further visual redesign, run a five-minute, five-person test — show the current mood grid alone (no explanation) and ask people to describe what each word means to them. If "Doubting" or "Convicted" get blank stares or discomfort, that is the signal to act on, not another internal redesign.

3. Screen inventory (current)

Screen	Purpose
Onboarding (7 steps)	Welcome, name, spiritual path, habits, mood preferences, group suggestion, summary
Login / Sign-up	Shown only when Firebase Auth is configured
Home	Header, greeting, 6-mood grid, Continue Your Journey, Explore quick actions, persistent crisis-resource footer
Guided flow (5 steps)	Scripture → Reflect → Meditate → Pray → Completion
Practice	Shortcuts into the guided flow and journaling
Explore (Library)	Book list → detail with progress and bookmarking
Community	Groups / Prayer / Discussions, with moderation
Profile	Settings + a sub-view for Progress & Journal

4. Bottom navigation

Five tabs: Home · Explore · Practice (emphasized, center) · Community · Profile. This structure came from a single external spec document, not from watching anyone navigate it. Whether people find Journeys or Progress without being told where they moved is untested.
