

LifeBook

PRD • TRD • MVP Scope • User Flow • UI Plan • Development Plan

Product principle: Meditate. Pray. Live the Word.

This document consolidates the current LifeBook direction into an implementation-oriented product package. It preserves the existing PRD's distinction between features that are built/tested and features that still require real-user validation.

Source basis: LifeBook Product Requirements Document, Version 4.0, September 2026.

1. Product Requirements Document (PRD)

1.1 Product vision

LifeBook is a Christian spiritual companion that helps users meditate on Scripture, bring their real-life concerns before God in prayer, and grow through biblical teaching and Christian community.

Core journey: Personal Scripture → Personal Prayer → Teaching & Community

1.2 Three core experiences

Experience	Purpose	Core question
Daily Bible Meditation	Daily Scripture, meditation, reflection and prayer	What can I meditate on with God today?
Prayer Sanctuary	Free-form prayer transformed into Scripture-centered meditation	How can I bring this situation before God?
LivingWord	Sermons, teaching, discussions and live ministry	How can I grow and connect with others?

1.3 Daily Bible Meditation requirements

- Daily Scripture experience.
- Guided meditation and reflection.
- Guided prayer.
- Use the existing guided flow as the foundation.
- Maintain a daily habit without unnecessary feature complexity.

1.4 Prayer Sanctuary requirements

- User can freely write or speak about what is on their heart.
- System identifies themes from the prayer.
- System retrieves relevant Scripture from a vetted biblical corpus.
- System generates a structured meditation from retrieved Scripture.
- Experience continues into reflection and prayer.
- The model must not invent Bible references from its own memory.
- Sensitive/crisis disclosures require stronger safety handling and a human-review pathway.

1.5 LivingWord requirements

- Sermons organized by topic.
- Audio and video teaching.
- Bible studies and Scripture-based discussions.
- Community participation.
- Scheduled live sessions with a pastor/ministry leader.
- Initial live model should be one-to-many broadcast rather than general peer-to-peer video calling.

1.6 Product principles

- AI supports Scripture engagement; it does not present itself as God, a prophet, or a replacement for pastoral care.
- Scripture retrieval should be grounded in a vetted corpus.

- Sensitive theological and pastoral situations need appropriate human oversight.
- Built/tested is not the same as validated by real users.
- Validate the core loop before broadening scope.

1.7 Success metrics

Metric	Initial target / requirement
Real users	Recruit 5–10 users for the first validation cohort
Day-7 return rate	Target ≥30% for the first cohort
Guided-flow completion	Target ≥80%, once analytics are instrumented
Content safety	Content flag rate target under 2%, subject to real-user measurement
Prayer Sanctuary quality	Relevant Scripture, useful reflection, safe handling of sensitive disclosures

2. Technical Requirements Document (TRD)

2.1 Architecture

The technical design should extend the existing LifeBook architecture rather than replace it. The core distinction for Prayer Sanctuary is between user-generated prayer content, semantic theme extraction, Scripture retrieval, and generated reflection.

Layer	Responsibility
Mobile/Web client	Onboarding, meditation, prayer input, LivingWord, community and live-session UX
Application API	Authentication, profiles, sessions, content, prayer records, community and analytics
AI orchestration	Prompting, theme extraction, meditation generation, safety classification and routing
Scripture retrieval	Search/filter over approved, tagged Scripture corpus
Content system	Sermons, audio/video, topics, teachers, metadata and publishing state
Community services	Posts, comments, groups, reports, moderation and notifications
Live service	One-to-many hosted video/audio sessions; integrate a managed provider rather than building WebRTC infrastructure
Data layer	Users, sessions, prayers, Scripture, content, community, moderation, analytics

2.2 Prayer Sanctuary pipeline

Input: free-form prayer text or speech transcript.

Pipeline: prayer input → safety classification → theme extraction → Scripture retrieval → relevance filtering → meditation generation → reflection → prayer.

Safety rule: Scripture references must resolve against the approved corpus before appearing to the user.

2.3 Suggested core entities

- User
- SpiritualSession
- Meditation
- Prayer

- PrayerTheme
- ScripturePassage
- ScriptureTag
- LivingWordContent
- Topic
- Teacher
- Community
- CommunityPost
- CommunityComment
- LiveSession
- ModerationCase
- AnalyticsEvent

2.4 Security and privacy

- Treat prayer entries as sensitive personal content.
- Use authentication and authorization for private prayer records.
- Encrypt data in transit and at rest through the chosen infrastructure.
- Apply rate limiting to AI and community endpoints.
- Separate private prayer data from public community content.
- Provide account/data deletion controls.
- Log safety decisions without unnecessarily storing sensitive raw content in operational logs.

2.5 Observability

- Track meditation start/completion.
- Track Prayer Sanctuary start, submission, retrieval success and completion.
- Track Scripture retrieval failures.
- Track safety escalations and moderation cases.
- Track LivingWord content plays and live-session joins.
- Track Day-1 and Day-7 retention.

3. MVP Scope

3.1 MVP objective

Prove that users repeatedly engage with a simple spiritual journey: meditate on Scripture, bring a real concern into prayer, and discover relevant biblical teaching.

Feature	MVP includes	Out of MVP
Daily Bible Meditation	Daily Scripture, reflection, meditation, prayer, completion tracking	Large personalization engine, advanced gamification
Prayer Sanctuary	Free text prayer, theme extraction, vetted Scripture retrieval, generated meditation reflections, prayer suggestions	Unbounded meditation reflections, prayer suggestions, community moderation
LivingWord	Topic library, sermon/audio/video content, text discussion, scheduled live sessions	Unbounded sermon/audio/video content, large social graph, creation of new content

Feature	MVP includes	Out of MVP
Community	Basic posts/comments/reporting/moderation	Complex social groups and broad social-network fe

3.2 MVP acceptance criteria

- A new user can complete a Daily Bible Meditation without assistance.
- A user can submit a free-form prayer and receive a Scripture-grounded meditation.
- Every displayed Scripture reference resolves to the approved corpus.
- Sensitive inputs are routed according to defined safety rules.
- A user can browse and play LivingWord content.
- A user can join a scheduled live session.
- Core events are instrumented for validation.
- The first 5–10 real users can complete the journey and provide qualitative feedback.

4. User Flow

4.1 Primary journey

Open LifeBook → Home → Daily Bible Meditation → Scripture → Reflect → Meditate → Pray → Complete → Return to Home

4.2 Prayer Sanctuary journey

Home → Prayer Sanctuary → Write/Speak Prayer → Safety Check → Identify Themes → Retrieve Vetted Scripture → Review Scripture Relevance → Generate Meditation → Reflect → Pray → Save Private Prayer Record → Suggested LivingWord content

4.3 LivingWord journey

Home → LivingWord → Browse Topic → Open Sermon/Teaching → Watch/Listen → Discuss → Follow Topic or Teacher → Join Scheduled Live Session

4.4 Safety branch

Any user input → Safety classifier → Normal spiritual experience OR supportive safety response / escalation pathway. The system must not treat keyword matching as sufficient for nuanced crisis disclosures.

4.5 Cross-feature loop

Meditation → Prayer Sanctuary → Relevant LivingWord teaching → Return to Daily Meditation

5. UI Plan

5.1 Navigation

Tab	Primary purpose	Key screens
Home	Daily entry point	Today, continue meditation, recent prayer, recommended LivingWord
Meditate	Daily Scripture practice	Scripture, reflect, meditate, pray, completion
Prayer Sanctuary	Private prayer experience	Prayer composer, processing, Scripture, meditation, reflection, prayer l
LivingWord	Teaching and community	Topics, sermons, audio/video, discussions, live sessions

Tab	Primary purpose	Key screens
Profile	Personal settings	Account, privacy, notification settings, history/progress

5.2 Daily Meditation UI

- Calm, focused reading screen.
- One primary action per step.
- Visible Scripture reference and source.
- Progress indicator for the guided flow.
- Minimal distractions.

5.3 Prayer Sanctuary UI

- Large private prayer composer with optional voice input.
- Clear privacy indicator.
- Gentle processing state after submission.
- Scripture cards showing reference and text.
- Meditation generated as a guided sequence rather than a long chatbot answer.
- Clear distinction between Scripture and AI-generated reflection.
- Easy return to prayer.

5.4 LivingWord UI

- Topic-first discovery.
- Featured teaching.
- Audio/video cards.
- Upcoming live session card.
- Discussion thread below relevant teaching.
- Simple report/moderation controls.

6. Development Plan

Phase 0 — Validation & preparation

- Recruit 5–10 real users.
- Instrument the existing Daily Bible Meditation flow.
- Review current UX with testers.
- Define theological/content review ownership.
- Finalize Prayer Sanctuary safety requirements.

Phase 1 — Prayer Sanctuary foundation

- Design prayer data model.
- Build free-form prayer input.
- Build theme extraction.

- Expand and tag vetted Scripture corpus.
- Implement retrieval service.
- Implement grounded meditation generation.
- Add safety classification and review queue.
- Add analytics.

Phase 2 — LivingWord

- Create content model and admin workflow.
- Implement topic browsing.
- Add audio/video playback.
- Add sermon/teaching pages.
- Implement basic Scripture discussions.
- Add moderation/reporting.

Phase 3 — Live Ministry

- Create scheduled LiveSession model.
- Integrate managed one-to-many live provider.
- Build host scheduling and start controls.
- Build viewer experience.
- Add session notifications.
- Measure joins, watch time and completion.

Phase 4 — Validation & iteration

- Run the three-feature journey with real users.
- Measure completion and retention.
- Review prayer outputs for Scripture relevance and tone.
- Review safety cases with a qualified human reviewer.
- Prioritize changes from observed user behavior.
- Only then expand community and personalization scope.

7. Technical Backlog — First Build Order

Priority	Work item	Outcome
P0	Analytics instrumentation	Know whether users complete the core loop
P0	Vetted Scripture corpus + tags	Safe retrieval foundation
P0	Prayer Sanctuary input + retrieval	Core differentiator works end-to-end
P0	Safety routing	Sensitive cases handled appropriately
P1	Prayer meditation UI	Complete Sanctuary experience
P1	LivingWord content model	Sermons/teachings become manageable
P1	LivingWord browse/player	Users can consume teaching

Priority	Work item	Outcome
P1	Basic discussion	Users can discuss Scripture
P2	Scheduled live sessions	One-to-many ministry experience
P2	Notifications	Bring users back to sessions and meditation
P2	Advanced personalization	Only after evidence from real usage

8. Key Product Risks

Risk	Mitigation
AI invents or misquotes Scripture	Retrieval-grounded Scripture corpus; validate every reference
Prayer Sanctuary surfaces crisis disclosures	Safety classifier, escalation rules, human review
Theological/content inconsistency	Named, staffed theological reviewer and content review pipeline
Community abuse	Moderation, reporting, rate limits and clear community rules
Live video scope expands too far	Start with scheduled one-to-many broadcast
Building before validation	Test with 5–10 real users before significant scope expansion

9. Final Product Definition

LifeBook helps you meditate on God's Word, bring your heart to God in prayer, and grow through biblical teaching and Christian community.

Daily Bible Meditation: Meet God in His Word.

Prayer Sanctuary: Bring what is really happening in your life before God.

LivingWord: Learn, grow and connect through biblical teaching and community.

Product loop: Discover → Respond → Grow → Return.

Product expression: Meditate. Pray. Live the Word.
